

## **Nitzan Matanel Summer Program 2025 - Testimonies**

### **Nitay**

"My name is Nitay and I am going into 5th grade. I really enjoy being at Technoda because I love science and medicine. Yesterday we visited the Science Museum, and I had such a great time because there were so many cool things. I really recommend coming here. At Technoda, I learn much more about science and medicine than I do at school, and that makes it fun for me. At school, I only learn a little bit about the human body, but not the way I do here. I have learned so many things. Just a few days ago, I found out that Newton discovered gravity when an apple fell on his head, and that was both funny and fascinating. I also learned about the solar system, which I found very interesting. Thanks to what I have learned at Technoda, I really want to become a doctor after I finish with soccer. Medicine and the human body are so fascinating, and they make me want to keep learning more and more."

### **Lavi**

"My name is Lavi and I am going into 6th grade. I enjoy the interesting activities at Technoda. We learn so many new things, and I think it is worth coming here. Technoda feels more special than school because we study things that most schools do not teach. For example, I learned here about how strong magnets are and about the possibility of life beyond Earth, and maybe soon we will move there. What I learn at Technoda really affects me because it teaches me new things and expands my knowledge. When I grow up, I want to be an astronaut and visit Mars."

### **Ofir**

"My name is Ofir and I am going into 7th grade. I enjoy Technoda because I learn things I did not know before about science and medicine. Technoda feels special because we learn things that schools do not usually teach, like how magnets stick, how medicine works, and about the planets. That is really interesting. I feel it has an impact on me because when I grow up, I want to go into space. We watched a video about it, and it was so cool."

### **Alma**

"My name is Alma and I am going into 5th grade. I really enjoy Technoda because there are so many different opportunities, and it's fun to learn new things. Technoda gives us freedom to experiment and explore science. I have learned so many new things that I did not know before, like the different units of measurements in chemistry, and that makes me curious to continue next year. I want to study medicine in the future, and I think what I learn here will help me, because when I grow up, I want to become a doctor."

### **Sarah**

"My name is Sarah and I am going into 4th grade. My favorite activity is solving puzzles using the letters table. I love Technoda summer program because I learn more here about the world than I do at school. In school, I do not learn the same things, but at Technoda, they explain more clearly about how things work and what creates them. I love gaining knowledge for the future. I learned that dry ice could be dangerous, that some materials create static electricity and that a pepper can stick to a balloon after rubbing it on your shirt, which is funny. I really love learning because it gives me more knowledge for the next school year. I think learning about the world suits me because there are so many things I want to know. When I grow up, I want to be a researcher."
