

Renovation Status – BINA Matanal Campus, Tel Aviv | August 2026

Renovation work at the BINA Matanal Campus in south Tel Aviv began in June and is being carried out by the Tel Aviv-Yafo Municipality. The project is now well underway, with extensive work being undertaken to adapt the building to its new design and planned uses. The renovation includes the demolition of existing walls, construction of new walls, and the reconfiguration of interior spaces. At the same time, major infrastructure work is in progress, including the installation of new electrical systems, upgrades to the air-conditioning system, and plumbing work, ensuring that all building systems are fully adapted to the new layout.

As part of the planning process, meetings have been held with an interior designer to develop the space both from a functional perspective and in a way that reflects the spirit, values, and unique character of BINA. The design process is focused on creating a welcoming, flexible, and inspiring environment that will support the campus's future activities.

The renovation represents an important step in preparing the campus for its future activities and will significantly improve both the building's infrastructure and the environment in which these activities will take place. The work is progressing according to the planned schedule, with completion currently expected in February 2027.

Attached are photos from the site documenting the progress of the renovation and illustrating the changes already taking place throughout the building.
